

K-30

General Information:

K-30 is an advanced generation of plant nutrient. Chelated with organic acids, it is water soluble and readily absorbed into the plant. K-30 is formulated without potentially toxic chloride salts.

GUARANTEED ANALYSIS:

Soluble Potassium (K₂O)30.0%

Derived from potassium glucoheptonate. Contains natural organic acids and potassium complex.

K-30

can be used on all plants. It is to be used as a supplemental potassium source for plants during peak requirement periods or extremely low potassium.

designed for foliar application and provides an immediate available source of potassium.

Application rates and timing of application of K-30 will vary between crops and fields. Refer to your Advanced Crop Nutrition consultant for specific recommendations. Apply the recommended amount of K-30 in at least 10 to 25 gallons water per acre.

Compatibility: K-30 is compatible with most fertilizers and registered pesticides. However, compatibility jar test is recommended before mixing. Always refer to products label.
