

# Soil Biology Boost

## General Information:

*Soil Biology Boost* is a biological inoculant containing 12 species of Microorganisms that will colonize the root and boost the biology in the rhizosphere. *Soil Biology Boost* helps create a healthy environment and ecosystem. *Soil Biology Boost* contains bacteria and fungi to improve nutrients solubility and availability, including beneficial Mycorrhizae fungi.

## Soil Biology Boost

recommended for use for all plants and soil types.

used at rate of 1.6 ounces of dry powder to the acre.

designed to be used with at least 16 ounces *Bio-Release*, as *Bio-Release* contains necessary activators to stimulate biological growth, in particular Mycorrhizae funi.

Recommended and most effective when used as a seed treatment. Use 1.6 ounces SBB per acre and 6-12 ounces *Bio-Release* per 100 pounds of seed as a liquid carrier. Make sure seed is completely dry prior to bagging or boxing, as storing wet seed may stick together and cause issues.

can be applied as a Planter Box treatment when mixed with *Dry Bio-Release*.

can be dissolved in most starter fertilizers and applied in furrow at plant time or side dressed. Must use a 50 mesh screen or larger.

**Compatibility:** *Soil Biology Boost* is compatible with most fertilizers (including phosphates). However, compatibility jar test is recommended before mixing. Always refer to products label.
