

# Solu-Plks

## General Information:

*Solu-Plks* is a fertilizer and soil additive. It is a biologically produced compound that reduces nutrient tie up in the soil, prevents chemical interaction of positive and negatively charged ions, which helps release unavailable plant nutrients. *Solu-Plks* is certified and designed to work in an outstanding way in the organic industry.

## Solu-Plks

in-furrow or side dress at .5 to 1 gallon per acre to release unavailable soil nutrients.

Combine with liquid fertilizer at 1 gallon *Solu-Plks* to 15 gallons fertilizer to chelate the nutrients and keep them plant available. It will prevent the chemical interaction of positive and negatively charged molecules.

broadcast at 1 gallon to the acre to increase soil biology and help breakdown crop residue.

Foliar apply at 8 to 32 ounces per acre to stimulate leaf surface biology and to increase plant up-take of foliar applied nutrients.

**TANK MIXING:** Fill the tank half full of water, add *Solu-Plks* and agitate to dissolve. Add dry formulations and dissolve, followed by liquids. Bring to volume with water.

**Compatibility:** *Solu-Plks* is compatible with most fertilizers (including phosphates) and registered pesticides. However, compatibility jar test is strongly encouraged before mixing. Always refer to products label.
